-----

Allow concatenation from within specific js and css files

-----

e.g. Inside of script.combined.js you could have

<!--#include file="libs/jquery-1.5.0.min.js" -->

<!--#include file="plugins/jquery.idletimer.js" -->

and they would be included into this single file

this is not in use in the boilerplate as it stands, you may

choose to name your files in this way for this advantage

or concatenate and minify them manually.

Disabled by default.

<FilesMatch "\.combined\.(js|css)\$">

Options +Includes

SetOutputFilter INCLUDES

```

Options -MultiViews

```

# -----
# custom 404 page
# -----

# You can add custom pages to handle 500 or 403 pretty easily, if you like.
ErrorDocument 404 /404.html

# -----
# UTF-8 encoding
# -----

```

use utf-8 encoding for anything served text/plain or text/html

AddDefaultCharset utf-8

force utf-8 for a number of file formats

AddCharset utf-8 .html .css .js .xml .json .rss

-----

A little more security

-----

Do we want to advertise the exact version number of Apache we're running?

Probably not.

This can only be enabled if used in httpd.conf - It will not work in .htaccess

ServerTokens Prod

*# "-Indexes" will have Apache block users from browsing folders without a default document
Usually you should leave this activated, because you shouldn't allow everybody to surf
through*

*# every folder on your server (which includes rather private places like CMS system
folders).*

Options -Indexes

Block access to "hidden" directories whose names begin with a period. This

includes directories used by version control systems such as Subversion or Git.

<IfModule mod_rewrite.c>

 RewriteRule "(^/)\." - [F]

</IfModule>

*# If your server is not already configured as such, the following directive
should be uncommented in order to set PHP's register_globals option to OFF.*

*# This closes a major security hole that is abused by most XSS (cross-site
scripting) attacks. For more information: http://php.net/register_globals
#*

IF REGISTER_GLOBALS DIRECTIVE CAUSES 500 INTERNAL SERVER ERRORS :

#

Your server does not allow PHP directives to be set via .htaccess. In that

case you must make this change in your php.ini file instead. If you are

using a commercial web host, contact the administrators for assistance in

doing this. Not all servers allow local php.ini files, and they should

include all PHP configurations (not just this one), or you will effectively

reset everything to PHP defaults. Consult www.php.net for more detailed

information about setting PHP directives.
