# On some specific Linux installations you could face problems with Firefox.
# It could give you errors when loading the editor saying that some illegal
# characters were found (three strange chars in the beginning of the file).
# This could happen if you map the . js or . css files to PHP, for example.
# Those characters are the Bute Order Mask (BOM) of the Unicode encoded files.
# All FCKeditor files are Unicode encoded.
AddType application/x-javascript .js
AddType text/css.css
# If PHP is mapped to handle XML files, you could have some issues. The
# following will disable it.
AddType text/xml .xml
```
