

```
# BULLETPROOF .46.9 >>>>>> SECURE .HTACCESS

# If you edit the BULLETPROOF .46.9 >>>>>> SECURE .HTACCESS text above
# you will see error messages on the BPS Security Status page
# BPS is reading the version number in the htaccess file to validate checks
# If you would like to change what is displayed above you
# will need to edit the BPS /includes/functions.php file to match your changes
# If you update your WordPress Permalinks the code between BEGIN WordPress and
# END WordPress is replaced by WP htaccess code.
# This removes all of the BPS security code and replaces it with just the default WP htaccess
# To restore this file use BPS Restore or activate BulletProof Mode for your Root folder again

# BEGIN WordPress
# IMPORTANT!!! DO NOT DELETE!!! - BEGIN Wordpress above or END WordPress - text in this file
# They are reference points for WP, BPS and other plugins to write to this htaccess file.
# IMPORTANT!!! DO NOT DELETE!!! - BPSQSE BPS QUERY STRING EXPLOITS - text
# BPS needs to find the - BPSQSE - text string in this file to validate that your security is on

# TURN OFF YOUR SERVER SIGNATURE
ServerSignature Off

# ADD A PHP HANDLER
# If you are using a PHP Handler add your web hosts PHP Handler below

# CUSTOM CODE TOP - Your Custom .htaccess code will be created here with AutoMagic

# DO NOT SHOW DIRECTORY LISTING
# If you are getting 500 Errors when activating BPS then comment out Options -Indexes
# by adding a # sign in front of it. If there is a typo anywhere in this file you will also
Options -Indexes

# DIRECTORY INDEX FORCE INDEX.PHP
# Use index.php as default directory index file
# index.html will be ignored will not load.
DirectoryIndex index.php index.html /index.php

# BPS PRO ERROR LOGGING AND TRACKING - Available in BPS Pro only
# BPS Pro has premade 403 Forbidden, 400 Bad Request and 404 Not Found files that are used
# to track and log 403, 400 and 404 errors that occur on your website. When a hacker attempts
# to hack your website the hackers IP address, Host name, Request Method, Referering link, the
# requested resource, the user agent of the hacker and the query string used in the hack are
```

```
# requested resource, the user agent of the hacker and the query string used in the hack attack.  
# BPS Pro Log files are added to the P-Security All Purpose File Manager to view them.  
# All BPS Pro log files are htaccess protected so that only you can view them.  
# The 400.php, 403.php and 404.php files are located in /wp-content/plugins/bulletproof-security/  
# The 400 and 403 Error logging files are already set up and will automatically start logging  
# after you install BPS Pro and have activated BulletProof Mode for your Root folder.  
# If you would like to log 404 errors you will need to copy the logging code in the BPS Pro  
# to your Theme's 404.php template file. Simple instructions are included in the BPS Pro 404.php  
# You can open the BPS Pro 404.php file using the WP Plugins Editor or by using the BPS Pro  
# NOTE: By default WordPress automatically looks in your Theme's folder for a 404.php template.
```

```

# REQUEST METHODS FILTERED
```

```
# This filter is for blocking junk bots and spam bots from making a HEAD request, but may allow  
# HEAD requests from bots that you want to allow in certain cases. This is not a security filter,  
# a nuisance filter. This filter will not block any important bots like the google bot. If you  
# all bots to make a HEAD request then remove HEAD from the Request Method filter.  
# The TRACE, DELETE, TRACK and DEBUG request methods should never be allowed against your website.
```

# BLOCK MORE BAD BOTS RIPPERS AND OFFLINE BROWSERS
# If you would like to block more bad bots you can get a blacklist from
# http://perishablepress.com/press/2007/06/28/ultimate-htaccess-blacklist/
# You should monitor your site very closely for at least a week if you add a bad bots list
# to see if any website traffic problems or other problems occur.
# Copy and paste your bad bots user agent code list directly below.
```
