# Rewrite module.
<IfModule mod_rewrite.c>
RewriteEngine on
# Per http://httpd.apache.org/docs/2.2/mod/mod_rewrite.html#rewriteoptions :
RewriteOptions inherit
RewriteBase /webmas-gallery

# 1. Simplify the rules for your sub-URI by redirecting a missing subdomain to 'www.':

RewriteCond %{HTTP_HOST} ^your_user_name\.com$ [NC]
RewriteRule ^(.*)$ http://www.your_user_name.com/webmas-gallery/$1 [L,R=301]

# 2. Rewrite your Rails application URI's to various files if they exist.

# 2.1. Rewrite its page-cached URI's:

# 2.1.1. Try to rewrite the sub-URI root URI to a file ('public/your_app_name.html') with
path '/home/your_user_name/public_html/your_app_name/your_app_name.html':

RewriteCond %{HTTP_HOST} ^www\.your_user_name\.com$ [NC]
RewriteCond %{REQUEST_FILENAME}webmas-gallery.html -f
#SHOW RewriteRule ^$ /webmas-gallery/webmas-gallery.html?dr=%{DOCUMENT_ROOT}&rf=%
{REQUEST_FILENAME} [L,R=301]
RewriteRule ^$ /webmas-gallery/webmas-gallery.html [L]

# 2.1.2. Try to rewrite a sub-URI, non-root URI to a file with extension '.html' (under
tree, 'public/your_app_name/') by prefixing
'/home/your_user_name/public_html/your_app_name' and suffixing '.html':

RewriteCond %{HTTP_HOST} ^www\.your_user_name\.com$ [NC]
RewriteCond %{DOCUMENT_ROOT}/webmas-gallery.html -f
RewriteRule ^(.*)$ /home/your_user_name/public_html/your_app_name/$1.html [L,R=301]

```

```
RewriteCond %{DOCUMENT_ROOT}/webmas-gallery%{REQUEST_URI}.html -f
#SHOW RewriteRule ^(.+)$ /webmas-gallery/$1.html?dr=%{DOCUMENT_ROOT}&ru=%
{REQUEST_URI}&rf=%{REQUEST_FILENAME} [L,R=301]
RewriteRule ^(.+)$ /webmas-gallery/webmas-gallery/$1.html [L]

# 3. Rewrite all other requests (except existing files) to the Rails port:

RewriteCond %{HTTP_HOST} ^www\..your_user_name\.com$ [NC]
RewriteCond %{REQUEST_FILENAME} !-f
#SHOW RewriteRule ^(.*)$ /webmas-gallery/webmas-gallery.html?rf=%{REQUEST_FILENAME}
[L,R=301]
RewriteRule ^(.*)$ http://127.0.0.1:12009/webmas-gallery/$1 [L,P]

</IfModule>
```
