

```
# Use the front controller as index file. It serves as fallback solution when  
# every other rewrite/redirect fails (e.g. in an aliased environment without  
# mod_rewrite). Additionally, this reduces the matching process for the  
# startpage (path "/") because otherwise Apache will apply the rewriting rules  
# to each configured DirectoryIndex file (e.g. index.php, index.html, index.pl).
```

```
DirectoryIndex app.php
```

```
<IfModule mod_rewrite.c>
```

```
    RewriteEngine On
```

```
    RewriteCond %{REQUEST_FILENAME} !-f
```

```
    RewriteRule ^(.*)$ app_dev.php [QSA,L]
```

```
</IfModule>
```
