```
# The following rule tells Apache that if the requested filename
# exists, simply serve it.
```

RewriteCond %(REQUEST_FILENAME) -s [OR] RewriteCond %(REQUEST_FILENAME) -1 [OR] RewriteCond %(REQUEST_FILENAME) -d RewriteRule ^.*\$ - [NC,L]

The following rewrites all other queries to index.php. The # condition ensures that if you are using Apache aliases to do # mass virtual hosting, the base path will be prepended to # allow proper resolution of the index.php file; it will work # in non-aliased environments as well, providing a safe, one-size # fits all solution.

RewriteCond %(REQUEST_URI)::\$1 ^(/.+)(.+)::\2\$
RewriteRule ^(.*) - [E=BASE: %1]
RewriteRule ^(.*)\$ %(ENV: BASE)index.php [NC,L]
