

```
# Wave Framework <http://www.waveframework.com>
# Apache Configuration
#
# Apache commands are stored in this file. This file loads the RewriteEngine, which is
used
# redirect all HTTP requests, except those to /static/ folders and those that are PHP
files
# itself, to Index Gateway stored in /index.php. These commands and Wave Framework itself
# only work when RewriteEngine is supported on the web server.
#
# @package    Index Gateway
# @author     Kristo Vaher <kristo@vaaher.net>

# @version    3.1.4

# This is required on some server setups for RewriteEngine to work properly
# But this can also throw 500 errors on some hosting environments, if it does then remove
it
Options +FollowSymLinks

# RewriteEngine is required to make Index gateway work correctly
RewriteEngine on

# Files from static folder are served directly
RewriteRule ^resources/static/ - [L]
RewriteRule ^filesystem/static/ - [L]

# Everything that is not a PHP file is redirected to index.php
# If you do not wish to redirect all to index.php, then write different RewriteRules for
this reason
# Everything redirected through Index gateway will make a small hit on performance, but
offer better handling and control in PHP
RewriteRule !^(.*)\.php$ ./index.php [QSA,L]
```
