#
# This is used with Apache WebServers
#
# The following blocks direct HTTP requests to all filetypes in this directory
# recursively, except certain approved exceptions
# Will also prevent people from seeing what is in the dir. and any sub-directories
#
# For this to work, you must include either 'All' or at least: 'Limit' and 'Indexes'
# parameters to the AllowOverride configuration in your apache/conf/httpd.conf file.
# Additionally, if you want the added protection offered by the OPTIONS directive below,
# you'll need to add 'Options' to the AllowOverride list, if 'All' is not specified.
# Example:
#<Directory "/usr/local/apache/htdocs">
# AllowOverride Limit Options Indexes
#</Directory>
#####

# deny *everything*
<FilesMatch ".*">
  <IfModule mod_authz_core.c>
    Require all denied
  </IfModule>
  <IfModule !mod_authz_core.c>
    Order Allow,Deny
    Deny from all
  </IfModule>
</FilesMatch>

# but now allow just *certain* necessary files:
<FilesMatch "(?i).*\.(js|css|jpg|gif|png|otf|curl|woff|woff2|ttf|svg|eot)$">
  <IfModule mod_authz_core.c>
    Require all granted
  </IfModule>
  <IfModule !mod_authz_core.c>
    Order Allow,Deny
    Allow from all
  </IfModule>
</FilesMatch>

```

```
</ITModule>
```

```
</FilesMatch>
```

```
