AuthType Basic
AuthName "No access"
AuthUserFile .htnopasswd
AuthGroupFile /dev/null
#Require valid-user

###############################
#
# This is used with Apache WebServers
#
# The following blocks direct HTTP requests to all filetypes in this directory
recursively, except certain approved exceptions
# It also prevents the ability of any scripts to run. No type of script, be it PHP, PERL
or whatever, can normally be executed if ExecCGI is disabled.
# Will also prevent people from seeing what is in the dir. and any sub-directories
#
# For this to work, you must include either 'All' or at least: 'Limit' and 'Indexes'
parameters to the AllowOverride configuration in your apache/conf/httpd.conf file.
# Additionally, if you want the added protection offered by the OPTIONS directive below,
you'll need to add 'Options' to the AllowOverride list, if 'All' is not specified.
# Example:
#<Directory "/usr/local/apache/htdocs">
#  AllowOverride Limit Options Indexes
#</Directory>
###############################

# deny *everything*
<FilesMatch ".*">
  <IfModule mod_authz_core.c>
    Require all denied
  </IfModule>
  <IfModule !mod_authz_core.c>
    Order Allow,Deny
    Deny from all
  </IfModule>
```

```
  </IfModule>
</FilesMatch>

# but now allow just *certain* necessary files:
<FilesMatch "(?i).*\.(zip|gzip|pdf|mp3|swf|wma|wmv|wav|epub|ogg|webm|m4v|m4a)$">
  <IfModule mod_authz_core.c>
    Require all granted
  </IfModule>
  <IfModule !mod_authz_core.c>
    Order Allow,Deny
    Allow from all
  </IfModule>
</FilesMatch>

<IfModule mod_headers.c>
  <FilesMatch "(?i).*\.(zip|pdf|mp3|swf|wma|wmv|wav|epub|ogg|m4v|m4a)$">
    # tell all downloads to automatically be treated as "save as" instead of launching in
an application directly
    # ALERT: ForceType requires Apache2 or later. If using older version of Apache, it
will need mod_mime installed. Or just comment out the ForceType line below
    # (to disable, just comment the next 2 lines by adding a '#' at the beginning of
each):
    ForceType application/octet-stream
    Header set Content-Disposition attachment
  </FilesMatch>
</IfModule>

IndexIgnore */*

## NOTE: If you want even greater security to prevent hackers from running scripts in this
folder, uncomment the following line (if your hosting company will allow you to use
OPTIONS):
# OPTIONS -Indexes -ExecCGI
```
