#
# This is used with Apache WebServers
# The following blocks direct HTTP requests to all filetypes in this directory
recursively, except certain approved exceptions
# It also prevents the ability of any scripts to run. No type of script, be it PHP, PERL
or whatever, can normally be executed if ExecCGI is disabled.
# Will also prevent people from seeing what is in the dir. and any sub-directories
#
# For this to work, you must include either 'All' or at least: 'Limit' and 'Indexes'
parameters to the AllowOverride configuration in your apache/conf/httpd.conf file.
# Additionally, if you want the added protection offered by the OPTIONS directive below,
you'll need to add 'Options' to the AllowOverride list, if 'All' is not specified.
# Example:
#<Directory "/usr/local/apache/htdocs">
# AllowOverride Limit Options Indexes
#</Directory>
```

<FilesMatch ".\*"> Order Allow,Deny Deny from all </FilesMatch>

# deny \*everything\*

#

```
# but now allow just *certain* necessary files:
<FilesMatch "(?i). *\.(jpe?glgiflwebplpnglswf)$" >
Order Allow,Deny
Allow from all
</FilesMatch>
```

IndexIgnore \*/\*

## NOTE: If you want even greater security to prevent hackers from running scripts in this folder, uncomment the following line (if your hosting company will allow you to use OPTIONS):

# ODITIONE TERESE EVELOPT

## 

## Optional caching improvements ## Requires mod\_headers to be enabled within Apache

## 

<**IfModule** mod\_headers.c>

Header unset Pragma

FileETag None

Header unset ETag

<FilesMatch "(?i). \*\.(jpe?gl gifl webpl pngl swf)\$">

Header set Cache-control "max-age=864000, public, must-revalidate"

Header unset Last-Modified

</FilesMatch>

</IfModule>
