#
# This is used with Apache WebServers
#
# The following blocks direct HTTP requests to all filetypes in this directory
recursively, except certain approved exceptions
# It also prevents the ability of any scripts to run. No type of script, be it PHP, PERL
or whatever, can normally be executed if ExecCGI is disabled.
# Will also prevent people from seeing what is in the dir. and any sub-directories
#
# For this to work, you must include either 'All' or at least: 'Limit' and 'Indexes'
parameters to the AllowOverride configuration in your apache/conf/httpd.conf file.
# Additionally, if you want the added protection offered by the OPTIONS directive below,
you'll need to add 'Options' to the AllowOverride list, if 'All' is not specified.
# Example:
#<Directory "/usr/local/apache/htdocs">
# AllowOverride Limit Options Indexes
#</Directory>
#####
```

[DirectoryIndex](#) index.php

```
# prevents inappropriate browsing
<FilesMatch ".*\..*">
    Order Allow,Deny
    Deny from all
</FilesMatch>
<FilesMatch "(^!^favicon.ico$. *\. (php|js|css|jpg|gif|png|html)$)">
    Order Allow,Deny
    Allow from all
</FilesMatch>
```

[IndexIgnore](#) */*
