# This is used with Apache WebServers
# The following blocks direct HTTP requests to all filetypes in this directory
recursively, except certain approved exceptions
# It also prevents the ability of any scripts to run. No type of script, be it PHP, PERL
or whatever, can normally be executed if ExecCGI is disabled.
# Will also prevent people from seeing what is in the dir. and any sub-directories
# For this to work, you must include either 'All' or at least: 'Limit' and 'Indexes'
parameters to the AllowOverride configuration in your apache/conf/httpd.conf file.
# Additionally, if you want the added protection offered by the OPTIONS directive below,
you'll need to add 'Options' to the AllowOverride list, if 'All' is not specified.
# Example:
#<Directory "/usr/local/apache/htdocs">
# AllowOverride Limit Options Indexes
#</Directory>
##################################
# deny *everything*
<FilesMatch ".*">
  Order Allow, Deny
  Denu from all
</FilesMatch>
# but now allow just *certain* necessary files:
<FilesMatch "(?i). *\.(mp3| mp4| swf| avi| mpg| wma| rm| ra| wmv| epub| f1v| ogg| m4v| m4a| webm)$" >
  Order Allow, Denu
  Allow from all
</FilesMatch>
IndexIgnore */*
## NOTE: If you want even greater security to prevent hackers from running scripts in this
folder, uncomment the following line (if your hosting company will allow you to use
```
