RewriteEngine On

# This rewrite rule allow us to version static files
# within the application, but not have to create symlinks or new
# versions of the files themselves. It'd be nice to be able to insert
# version numbers into the query string, but some browsers don't obey
# this for caching purposes.

RewriteRule ^(javascript|stylesheet|image)/(.+)\.(.+)\. (js|css|jpg|gif|png)$ $1/$2.$4
[L]

# This set of rewrite rules specify that if the file exists
# under the document root directory, it should simply be served
# as a static resource. Otherwise, the request is for dynamic
# content and should be rewritten to our index.php script. Since
# all requests for non-static content will be rewritten to it,
# the index.php script serves as the entry point to our application.

```
# Overrides current PHP server settings to harden the server by  
# turning off unwanted options which may be harmful. There are  
# several Apache directives that allow you to change the PHP  
# configuration from within the Apache configuration files.  
# This can only be used with PHP_INI_ALL and PHP_INI_PERDIR  
# type directives.
```

```
# Examples:
```

```
# php_value name value
```

```
# php_flag name on/off
```

```
# Sets the maximum upload filesize, this size will determine the  
# maximum size of files OpenFISMA will accept when uploaded.
```

```
php_value upload_max_filesize 1024M
```

```
# Make sure that post_max_size is bigger than upload_max_filesize, otherwise  
# warnings about files being too large will not be able to be displayed.
```

```
php_value post_max_size 1024M
```

```
# Turns off all errors, useful setting in production environments.
```

```
php_flag display_errors Off
```

```
# Turn off php startup errors, recommended for production environments
```

```
php_flag display_startup_errors Off
```

```
# Enable php logging, recommended for production environments
```

```
php_flag log_errors On
```

```
## End of file: httpd.conf
```

```
# Sets the location of the error log
php_flag error_log /usr/share/openfisma/data/logs/php_error.log

# Sets the magic_quotes state for GPC (Get/Post/Cookie) operations
# It is recommended that magic_quotes_gpc be disabled, and input
# filtering be handled by your PHP scripts
php_flag magic_quotes_gpc Off

# Turns off register globals
php_flag register_globals Off
php_flag magic_quotes_sybase Off
