Protect files and directories from prying eyes.

<FilesMatch "\.(enginelinclinfolinstall|makelmodulelprofile|test|polshl.*sql|themeltpl(\.php |xtmpl)(|~|\.sw[op]|\.bak|\.orig|\.save)? \$|^(\..*|Entries.*|Repository|Root|Tag|Template)\$|^#.*#\$|\.php(~|\.sw[op]|\.bak|\.orig\.save Order allow,deny

</FilesMatch>

Don't show directory listings for URLs which map to a directory, Options -Indexes

Follow symbolic links in this directory,
Options +FollowSymLinks

Make Drupal handle any 404 errors. ErrorDocument 404 /index.php

Set the default handler. DirectoryIndex index.php index.html index.htm

Override PHP settings that cannot be changed at runtime. See

sites/default/default.settings.php and drupal_environment_initialize() in

includes/bootstrap.inc for settings that can be changed at runtime.

PHP 5, Apache 1 and 2,

<ifmodule mod_php5.c=""></ifmodule>	
php_flag magic_quotes_gpc	off
php_flag magic_quotes_sybase	off
php_flag register_globals	off
php_flag session.auto_start	off
php_value mbstring.http_input	pass
php_value mbstring.http_output	pass
php_flag mbstring.encoding_translation	off

Requires mod_expires to be enabled.

<IfModule mod_expires.c> # Enable expirations. ExpiresActive On

Cache all files for 2 weeks after access (A).
EvelopeEvelt of 000000

<FilesMatch \. php\$>

Do not allow PHP scripts to be cached unless they explicitly send cache # headers themselves. Otherwise all scripts would have to overwrite the # headers set by mod_expires if they want another caching behavior. This may # fail if an error occurs early in the bootstrap process, and it may cause # problems if a non-Drupal PHP file is installed in a subdirectory. ExpiresActive Off </FilesMatch> </IfModule>

Various rewrite rules.

<IfModule mod_rewrite.c> RewriteEngine on

Set "protossl" to "s" if we were accessed via https://. This is used later # if you enable "www." stripping or enforcement, in order to ensure that # you don't bounce between http and https. RewriteRule ^ - [E=protossl] RewriteCond %(HTTPS) on RewriteRule ^ - [E=protossl:s]

```
# Block access to "hidden" directories whose names begin with a period. This
# includes directories used by version control systems such as Subversion or
# Git to store control files. Files whose names begin with a period, as well
# as the control files used by CVS, are protected by the FilesMatch directive
# above.
```

#

```
# NOTE: This only works when mod_rewrite is loaded. Without mod_rewrite, it is
# not possible to block access to entire directories from .htaccess because
# <DirectoryMatch> is not allowed here.
#
```

If you do not have mod_rewrite installed, you should remove these
directories from your webroot or otherwise protect them from being
downloaded.
RewriteRule "(^|/)\." - [F]

If your site can be accessed both with and without the 'www.' prefix, you # can use one of the following settings to redirect users to your preferred # URL, either WITH or WITHOUT the 'www.' prefix. Choose ONLY one option:

```
#
# To redirect all users to access the site WITH the 'www.' prefix,
# (http://example.com/... will be redirected to http://www.example.com/...)
# uncomment the following:
# RewriteCond %(HTTP_HOST) .
# RewriteCond %(HTTP_HOST) ! ^www\. [NC]
# RewriteRule ^ http%(ENV;protossl);//www.%(HTTP_HOST)%(REQUEST_URI) [L,R=301]
#
# To redirect all users to access the site WITHOUT the 'www.' prefix,
# (http://www.example.com/... will be redirected to http://example.com/...)
# uncomment the following:
# RewriteCond %{HTTP_HOST} ^www\.(.+)$ [NC]
# RewriteRule ^ http%(ENV: protossl): //%1%(REQUEST_URI) [L,R=301]
# Modify the RewriteBase if you are using Drupal in a subdirectory or in a
# VirtualDocumentRoot and the rewrite rules are not working properly.
# For example if your site is at http://example.com/drupal uncomment and
# modify the following line:
# RewriteBase /drupal
#
# If your site is running in a VirtualDocumentRoot at http://example.com/,
# uncomment the following line:
# RewriteBase /
# Redirect common PHP files to their new locations.
RewriteCond %(REQUEST_URI) ^(.*)?/(update.php) [OR]
RewriteCond %(REQUEST_URI) ^(.*)?/(install.php) [OR]
```

RewriteCond %(REQUEST_URI) ^(.*)?/(cron.php)

RewriteCond %(REQUEST_URI) ! core -

```
RewriteRule ^ %1/core/%2 [L,QSA,R=301]
```

```
# Rules to correctly serve gzip compressed CSS and JS files.
# Requires both mod_rewrite and mod_headers to be enabled.
```

```
<!fModule mod_headers.c>
    # Serve gzip compressed CSS files if they exist and the client accepts gzip.
    RewriteCond %(HTTP: Accept-encoding) gzip
    RewriteRule ^(.*)\.css $1\.css\.gz [QSA]

    # Serve gzip compressed JS files if they exist and the client accepts gzip.
    RewriteCond %(HTTP: Accept-encoding) gzip
    RewriteCond %(HTTP: Accept-encoding) gzip
    RewriteCond %(REQUEST_FILENAME)\.gz -s
```

RewriteRule ^(. *)\. js \$1\. js\. gz [QSA]

Serve correct content types, and prevent mod_deflate double gzip.
RewriteRule \.css\.gz\$ - [T=text/css,E=no-gzip:1]
RewriteRule \.js\.gz\$ - [T=text/javascript,E=no-gzip:1]

```
<FilesMatch "(\. js\. gzl \. css\. gz)$">
    # Serve correct encoding type.
    Header set Content-Encoding gzip
    # Force proxies to cache gzipped & non-gzipped css/js files separately.
    Header append Vary Accept-Encoding
    </FilesMatch>
    </IfModule>
<//IfModule><///related
```
