Set the default handler.
DirectoryIndex index.php index.html index.html

Add correct encoding for SVGZ.

AddType image/svg+xml svg svgz AddEncoding gzip svgz

Most of the following PHP settings cannot be changed at runtime. See # sites/default/default.settings.php and # Drupal\Core\DrupalKernel::bootEnvironment() for settings that can be

changed at runtime.

PHP 5, Apache 1 and 2,

<ifmodule mod_php5.c=""></ifmodule>	
php_value assert.active	0
php_flag session.auto_start	off
php_value mbstring.http_input	pass
php_value mbstring.http_output	pass
php_flag mbstring.encoding_translation	off
# PHP 5.6 has deprecated \$HTTP_RAW_POST_DATA and produces warnings if this is	
# not set.	
	4

pnp_value always_populate_raw_post_data -1
</IfModule>

Requires mod_expires to be enabled.

<IfModule mod_expires.c> # Enable expirations. ExpiresActive On

Cache all files for 2 weeks after access (R).
ExpiresDefault A1209600

<FilesMatch \. php\$>

Do not allow PHP scripts to be cached unless they explicitly send cache # headers themselves. Otherwise all scripts would have to overwrite the # headers set by mod_expires if they want another caching behavior. This may # fail if an error occurs early in the bootstrap process, and it may cause # problems if a non-Drupal PHP file is installed in a subdirectory. ExpiresActive Off </FilesMatch> </IfModule>

```
# Set a fallback resource if mod_rewrite is not enabled. This allows Drupal to
# work without clean URLs. This requires Apache version >= 2.2.16. If Drupal is
# not accessed by the top level URL (i.e.: http://example.com/drupal/ instead of
# http://example.com/), the path to index.php will need to be adjusted.
<IfModule !mod_rewrite.c>
```

FallbackResource /index.php

</IfModule>

Various rewrite rules.

<IfModule mod_rewrite.c> RewriteEngine on

Set "protossl" to "s" if we were accessed via https://. This is used later # if you enable "www." stripping or enforcement, in order to ensure that # you don't bounce between http and https. RewriteRule ^ - [E=protossl] RewriteCond %(HTTPS) on RewriteRule ^ - [E=protossl:s]

Make sure Authorization HTTP header is available to PHP

```
# even when running as CGI or FastCGI.
RewriteRule ^ - [E=HTTP_AUTHORIZATION: %(HTTP: Authorization)]
# Block access to "hidden" directories whose names begin with a period. This
# includes directories used by version control systems such as Subversion or
# Git to store control files. Files whose names begin with a period, as well
# as the control files used by CVS, are protected by the FilesMatch directive
# above.
#
# NOTE: This only works when mod_rewrite is loaded. Without mod_rewrite, it is
# not possible to block access to entire directories from .htaccess because
# <DirectoryMatch> is not allowed here.
#
# If you do not have mod_rewrite installed, you should remove these
# directories from your webroot or otherwise protect them from being
# downloaded.
RewriteRule "(^L/)\." - [F]
# If your site can be accessed both with and without the 'www.' prefix, you
# can use one of the following settings to redirect users to your preferred
# URL, either WITH or WITHOUT the 'www.' prefix. Choose ONLY one option:
#
# To redirect all users to access the site WITH the 'www.' prefix,
# (http://example.com/foo will be redirected to http://www.example.com/foo)
# uncomment the following:
# RewriteCond %(HTTP_HOST) .
# RewriteCond %(HTTP_HOST) ! ^www\. [NC]
# RewriteRule ^ http%(ENV: protoss1)://www.%(HTTP_HOST)%(REQUEST_URI) [L,R=301]
#
# To redirect all users to access the site WITHOUT the 'www.' prefix,
# (http://www.example.com/foo will be redirected to http://example.com/foo)
# uncomment the following:
# RewriteCond %{HTTP_HOST} ^www\.(.+)$ [NC]
# RewriteRule ^ http%(ENV; protossl); //%1%(REQUEST_URI) [L,R=301]
# Modify the RewriteBase if you are using Drupal in a subdirectory or in a
# VirtualDocumentRoot and the rewrite rules are not working properly.
# For example if your site is at http://example.com/drupal uncomment and
# modify the following line:
# RewriteBase /drupal
```

#

If your site is running in a VirtualDocumentRoot at http://example.com/, # uncomment the following line: # RewriteBase /

Redirect common PHP files to their new locations.
RewriteCond %(REQUEST_URI) ^(.*)?/(install.php) [OR]
RewriteCond %(REQUEST_URI) ^(.*)?/(rebuild.php)
RewriteCond %(REQUEST_URI) ! core
RewriteRule ^ %1/core/%2 [L,QSA,R=301]

Rewrite install.php during installation to see if mod_rewrite is working
RewriteRule ^core/install.php core/install.php?rewrite=ok [QSA,L]

Pass all requests not referring directly to files in the filesystem to
index.php.
RewriteCond %(REQUEST_FILENAME) ! -f
RewriteCond %(REQUEST_FILENAME) ! -d
RewriteCond %(REQUEST_URI) ! =/favicon.ico
RewriteRule ^ index.php [L]

For security reasons, deny access to other PHP files on public sites. # Note: The following URI conditions are not anchored at the start (^), # because Drupal may be located in a subdirectory. To further improve # security, you can replace '!/' with '!^'. # Allow access to PHP files in /core (like authorize.php or install.php): RewriteCond %(REQUEST_URI) !/core/[^/]*\.php\$ # Allow access to test-specific PHP files: RewriteCond %(REQUEST_URI) !/core/modules/system/tests/https?.php # Allow access to Statistics module's custom front controller. # Copy and adapt this rule to directly execute PHP files in contributed or # custom modules or to run another PHP application in the same directory. RewriteCond %(REQUEST_URI) !/core/modules/statistics/statistics.php\$ # Deny access to any other PHP files that do not match the rules above. # Specifically, disallow autoload.php from being served directly. RewriteRule "^(.+/.*l autoload)\.php(\$L/)" - [F]

Rules to correctly serve gzip compressed CSS and JS files.

Requires both mod_rewrite and mod_headers to be enabled.

<IfModule mod_headers.c>

Serve gzip compressed CSS files if they exist and the client accepts gzip.
RewriteCond %(HTTP: Accept-encoding) gzip

```
RewriteCond %(REQUEST_FILENAME)\.gz -s
RewriteRule ^(.*)\.css $1\.css\.gz [QSA]
```

Serve gzip compressed JS files if they exist and the client accepts gzip.
RewriteCond %(HTTP: Accept-encoding) gzip
RewriteCond %(REQUEST_FILENAME)\.gz -s
RewriteRule ^(.*)\.js \$1\.js\.gz [QSA]

```
# Serve correct content types, and prevent mod_deflate double gzip.
RewriteRule \.css\.gz$ - [T=text/css,E=no-gzip:1]
RewriteRule \.js\.gz$ - [T=text/javascript,E=no-gzip:1]
```

```
<FilesMatch "(\, js\, gzl\, css\, gz)$">
    # Serve correct encoding type.
    Header set Content-Encoding gzip
    # Force proxies to cache gzipped & non-gzipped css/js files separately.
    Header append Vary Accept-Encoding
    </FilesMatch>
    </IfModule>
<//IfModule>
# Add headers to all responses.
</IfModule mod headers, c>
```

Disable content sniffing, since it's an attack vector.
Header always set X-Content-Type-Options nosniff
</IfModule>
RewriteEngine on
RewriteRule index\. html index. php [NC, R]
