# READ THIS COMPLETELY IF YOU CHOOSE TO USE THIS FILE!
# The line just below this section: 'Options +FollowSymLinks' may cause problems
# with some server configurations. It is required for use of mod_rewrite, but may already
# be set by your server administrator in a way that dissallows changing it in
# your .htaccess file.  If using it causes your server to error out, comment it out (add #
to
# beginning of line), reload your site in your browser and test your sef url's. If they
work,
# it has been set by your server administrator and you do not need it set here.
## Can be commented out if causes errors, see notes above.
# For security reasons, Option followsymlinks cannot be overridden.
