Turn on mod_rewrite to capture the shortname from a url and pass it on as a url parameter

RewriteEngine On

Only use 1 of the following RewriteBase options ~ comment the other out

for when Sahana is installed on a virtual host at root level ie. http://domain.com/

#RewriteBase /

for when Sahana is installed in a user homedir ie.

http://domain.gov/~gmiernicki/sahanaDev/www/

RewriteBase /vesuvius/www/

make mod_rewrite skip the subsequent rules if the file or folder exists already (the number must be incremented each time a new rule is added below)
