

If you have problem with session, auto_start on install you need to set this value to 0 on php.ini or uncomment this line

```
#php_value session.auto_start 0
```

The following lines enable the apache rewriting for the api. You can use url like http://glpi/api/.

```
#<IfModule mod_rewrite.c>
```

```
# RewriteEngine On
```

```
# RewriteCond %{REQUEST_FILENAME} !-f
```

```
# RewriteCond %{REQUEST_FILENAME} !-d
```

```
# RewriteRule api/(.*)$ apirest.php/$1
```

```
#</IfModule>
```

You can uncomment following lines to enable caching of web assets (pictures, javascript files, etc)

```
#<IfModule mod_expires.c>
```

```
# ExpiresActive On
```

```
# ExpiresByType image/jpg "access 1 year"
```

```
# ExpiresByType image/jpeg "access 1 year"
```

```
# ExpiresByType image/gif "access 1 year"
```

```
# ExpiresByType image/png "access 1 year"
```

```
# ExpiresByType text/css "access 1 year"
```

```
# ExpiresByType text/x-javascript "access 1 year"
```

```
# ExpiresByType text/javascript "access 1 year"
```

```
# ExpiresByType application/javascript "access 1 year"
```

```
#</IfModule>
```
