#

# This is used with Apache WebServers

#

# The following blocks direct HTTP requests to all filetypes in this directory
recursively, except certain approved exceptions

# It also prevents the ability of any scripts to run. No type of script, be it PHP, PERL
or whatever, can normally be executed if ExecCGI is disabled.

# Will also prevent people from seeing what is in the dir. and any sub-directories

#

# For this to work, you must include either 'All' or at least: 'Limit' and 'Indexes'
parameters to the AllowOverride configuration in your apache/conf/httpd.conf file.

# Example:

#<Directory "/usr/local/apache/htdocs">

# AllowOverride Limit Indexes

#</Directory>

#####

<Limit GET POST PUT>

Order Allow,Deny
```

Deny from All

</Limit>

#NOBODY SHOULD BE SNOOPING HERE

*# deny *everything**

<FilesMatch ".*">

Order Allow,Deny

Deny from all

</FilesMatch>

IndexIgnore /*
