

```
#  
# Hey! Everything in here is better suited to httpd.conf, since  
# we get a performance boost if we can turn off AllowOverride and  
# not have to stat the webroot for every request. On the other  
# hand, this means we never have to touch apache once it's up.  
# Flexibility over performance.  
#  
# In an ideal world, you'd stick it in here on dev and your build  
# system would bundle the changes into (a file included in) httpd.conf  
# for your production deployment, perhaps wrapped in a <VirtualHost>  
# block.  
#
```

```
# ETags are a bad idea if you have multiple web servers. We'll do  
# more explicit caching with Expires headers anyway.
```

```
FileETag none
```

```
# The base set of sensible PHP options. You could put these in your  
# php.ini file too, but having them in your Apache config puts  
# everything in one place. Magic quotes off because they are stupid.  
# Register globals off for the same reason. Track errors is so that  
# we can at least get at the error messages we hide using @func().  
# last_modified is a bad idea if we have any dynamic content. Short  
# tags make for a few saved bytes of cruft and are fine unless you're  
# running another XML preprocessor over your code (wtf?).
```

```
php_value magic_quotes_gpc 0  
php_value register_globals 0  
php_value magic_quotes_runtime 0  
php_value track_errors 1  
php_value last_modified off  
php_value short_open_tag on
```

```
# This value is very useful for development, but should be disabled  
# on production deployments (by setting the value to 'off')
```

```
php_flag display_errors on
```

```
# this sets all current and future error flags on, except for E_NOTICE  
# which can go fuck itself. we have some separate code for checking the  
# one notice we do care about.
```

```
php_value error_reporting 2147483639
```

Some basic pointers to php files

```
DirectoryIndex index.php
ErrorDocument 404 /404.php
ErrorDocument 403 /403.php
```

Get mod_rewrite fired up

```
RewriteEngine on
```

Login stuff

```
RewriteRule ^signup$      signup.php    [L]
RewriteRule ^signin$     signin.php    [L]
RewriteRule ^signout$    signout.php   [L]
RewriteRule ^checkcookie$ checkcookie.php [L]
```

Password retrieval stuff

```
RewriteRule ^forgot$      forgot.php    [L]
RewriteRule ^reset/([a-zA-Z0-9]+)$ reset.php?reset=$1 [L,QSA]
```

Account stuff

```
RewriteRule ^account$     account.php   [L]
RewriteRule ^account/password$ account_password.php [L]
RewriteRule ^account/delete$ account_delete.php [L]
```

General pages

```
RewriteRule ^about$       about.php     [L,QSA]
RewriteRule ^contact$     contact.php   [L,QSA]
```

Images

```
RewriteRule ^image/([0-9]+)/?$ image.php?id=$1&%(QUERY_STRING) [L]
```

Test pages

```
RewriteRule ^paging$      paging.php    [L]
RewriteRule ^paging/page(\d+)$ paging.php?page=$1 [L,QSA]
```
