# set the correct mime type for woff2 font type
# =====
# if you don't set your own mimetypes or you aren't using
# http://httpd.apache.org/docs/2.4/mod/mod\_mime.html#mime.types

```

```
# nini's boilerplate server configs https://github.com/nini/server-configs-apache  
# then you can uncomment (delete the hash/pound/octothorpe/number symbol) the section  
below:
```

```
#<IfModule mod_mime.c>  
# AddType application/font-woff2    woff2  
#</IfModule>
```
