#####

#####

#### Options
Options +FollowSymLinks -MultiViews -Indexes

#### Add a slash after a directory
DirectorySlash On

#### Hide the directory contents and serves index.php instead
DirectoryIndex index.php

#### Turn RewriteEngine on
RewriteEngine on

#####

#### #IMPORTANT - Set install folder location. If installing in a root directory you're
all set, leave it as is - empty. If installing in a subdirectory, add the subdirectory
name with no trailing slash. Example: SetEnv ROOT_PATH /yoursubdirectoryname

SetEnv ROOT_PATH

#####

#### OPTIONAL - DISABLED BY DEFAULT - Uncomment to enable - 301 redirect www.site.com to
site.com

# RewriteCond %{HTTP_HOST} ^www\.[SITE\.com]$
# RewriteRule ^/?$ "http://www/[SITE\.com]/" [L,R=301]

#####
```

#####

#### *OPTIONAL - DISABLED BY DEFAULT - Uncomment to enable - Drops .php page extensions,  
example: /about/location.php becomes /about/location*

```
# RewriteCond %{REQUEST_FILENAME} !-f
# RewriteCond %{REQUEST_FILENAME} !-d
# RewriteCond %{REQUEST_FILENAME}.php -f
# RewriteRule ^(.+)$ $1.php [L,QSA]
```
