

RewriteEngine on

client-side URI mapping

if you are running in a top-level domain, you should use this:

RewriteBase /

ErrorDocument 404 /index.php?q=404

if you are running in a subfolder, you should instead use this:

RewriteBase /withbitcoin

ErrorDocument 404 /withbitcoin/index.php?q=404

This rewrites /foo to /index.php?q=foo

RewriteRule ^([0-9A-Za-z_\-]+)?\$ index.php?q=\$1 [L]

RewriteRule ^([0-9A-Za-z_\-]+)/([0-9A-Za-z_\-]+)\$ index.php?q=\$1/\$2 [L]
