# BEGIN HTML5 Boilerplate

###
### This contains the HTML5 Boilerplate .htaccess that can be found at:
###   github.com/h5bp/html5-boilerplate/blob/master/.htaccess
###
### Added:
###   Block access to access to WordPress files that reveal version information.
###
### Commented out by default:
###   Expires headers:       Use WP Super Cache or W3 Total Cache (unless using the H5BP buil
###   ETag removal:          Use WP Super Cache or W3 Total Cache (unless using the H5BP buil
###   Start rewrite engine:  Handled by WordPress
###   Suppress/force www:    Handled by WordPress
###   Options -MultiViews:   Causes a server 500 error on most shared hosts
###   Custom 404 page:       Handled by WordPress
###
### Anytime you update this file the .htaccess file in the root of your
### WordPress install is automatically updated with the changes whenever
### the permalinks are flushed or set
###
